

Steel Garden Edging - Project Guide & Pricing

Create clean, durable garden edges with professional steel edging systems.
This guide will help you choose the right system and height for your project.

Choosing the Right Height

- **75–100mm** — Lawn edges and pathways
 - **150mm** — Garden beds and separation
 - **240mm plus**— Raised beds , retaining and below/above ground separation
-

Choosing the Right System

Straightcurve System (Panels)

A flexible, professional system for custom layouts.

- **Rigid Line** — straight runs
 - **Flex Line** — curves, circles and flowing shapes
 - **Zero Flex (Heavy Duty)** — Continuous smooth rolled top for added strength and child & pet safety .Stabilising foot to prevent shunting
 - Installed using joiner system and spikes (included)
 - Available in Weathered Steel and Galvanised Steel
 - Available in Heights of 75mm, 100mm, 150mm, 240mm, 400mm and 560mm
 - Zero Flex is available in 100 and 150mm only.
-

Straightcurve Click-n-Connect System

A fast-install, DIY-friendly system supplied in set packs to achieve the length required for your project

- No screws required (pop rivet system)
- Pre-designed packs for easy planning
- Integrated fixing system with spike guides
- Ideal for quick installations and smaller projects
- Available in Heights of 100and 150mm
- Available in Rigid or Flex line
- Available in 3 Pack sizes – Ling set (7.2m), Short Set (1.6m) , Infill set (800

Formline System

A clean, modern system with simple installation.

- Slide-together connection (no joiners required)
- Flat base plate for stability
- Available in Weathered, Galvanised, Black and White
- Available in heights of 150mm, 250mm, 400mm and 550mm,

Important

The different edging systems are not compatible and cannot be joined together.

Ensure all components selected are from the same system if installing in the same area.

Weathered steel is similar in both systems, we choose to offer both so we can offer height and colour variations, they are both excellent systems.

Bracing Requirements for Heights 240mm and above.

- **In-ground:** Usually no bracing required
- **Above ground:** Bracing recommended for strength and stability
- **Universal Bracing** is the best choice when the ground is hard
- **Brace Posts** suit better when the ground is soft or for larger projects
